## **Abstract**

This documents how the repository of the BibTeX *Analytics* project is organized, and its software architecture. It also describes the future goals of the project for using a data analytics approach to recognize emerging trends in research, especially emerging research trends in electrical and computer engineering, computer science, and other fields, such as medicine, agriculture, and environmental science.

Insert abstract here.

More stuff to be included.

# Chapter 1

## Organization of the BIBTEX Analytics Repository

The main deliverables of the BIBTEX *Analytics* project are a *Python*-based software to perform reference management, and data analytics on BIBTEX entries to recognize emerging research trends.

The organization of the BIBTEX *Analytics* repository is described as follows:

1. `automated_regression_testing.py`:
  - (a) *Python* script to automate regression testing.
2. `big_input`:
  - (a) Data set for stress testing the software deliverable of the BIBTEX *Analytics* project.
3. `database`
  - (a) `bibtex_database` (`bibtex_database.py`) class represents (each instance of) a BIBTEX database of BIBTEX entries.
  - (b) `bibtex_database_test.py` is a *Python* script to test the functionality of the `bibtex_database` class.
  - (c) `entry` (`entry.py`) class represents each (instance of a) BIBTEX entry.
  - (d) `entry_test.py` is a *Python* script to test the functionality of the `entry` class.
  - (e) `key_check.py` is a *Python* script to check if each BIBTEX entry is valid.
  - (f) `key_check_test.py` is a *Python* script to test the functionality of the *Python* script `key_check.py`.
  - (g) `key_frequency_pairs.py` is a *Python* script to demonstrate how to sort a set of 2-tuples based on its first/former field and its second/last/latter field.
4. `duplicate_BibTeX_entries.py`:
  - (a) A *Python* script to determine if duplicate BIBTEX entries exist in a BIBTEX file/database. If such entries exist, warn the user that duplicate BIBTEX entries exist.
5. `editions.py`:
  - (a) A *Python* script to display a set of editions from all the BIBTEX entries in a BIBTEX file/-database.
6. `incremental_test.py`:
  - (a) A *Python* script to incrementally test features for performing reference management and data analytics operations with BIBTEX files/databases.
7. `input`:
  - (a) A set of BIBTEX files to test my *Python*-based BIBTEX *Analytics* software.

8. `institutions.py`:
  - (a) A *Python* script to display a set of institutions from B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> entries in a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> file/database.
9. `journal_titles.py`:
  - (a) A *Python* script to display a set of journal titles from B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> entries in a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> database.
10. `keywords_display.py`:
  - (a) A *Python* script to display a set of keywords from B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> entries in a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> database.
11. `makefile`:
  - (a) For build automation of *Python* scripts, not placed in subdirectories, in the repository.
12. `notes`:
  - (a) `gpl-license.text`, `LICENSE`, and `mit-license.text` are text files of the GNU General Public License (GNU GPL) (`gpl-license.text`) and The MIT License (`LICENSE` and `mit-license.text`)
  - (b) `guidelines`:
    - i. A document containing a set of guidelines on how to collaborate with me.
  - (c) `report`:
    - i. This document that describes the organization of the B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> *Analytics* repository, the software architecture of the B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> *Analytics* software, and future work of the B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> *Analytics* project.
13. `organizations.py`:
  - (a) A *Python* script to display a set of organizations from B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> entries in a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> database.
14. `publishers.py`:
  - (a) A *Python* script to display a set of publishers from B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> entries in a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> database.
15. `readme.md`:
  - (a) A *Markdown*-based `readme` document briefly describing this project.
16. `rm_bibtex_metadata.py`:
  - (a) A *Python* script to delint/remove B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> metadata from a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> database/file.
17. `sandbox`:
  - (a) A set of *Python* scripts to test different concepts in *Python*.
18. `statistics`:
  - (a) `test_statistics_tester.py` is a *Python* script to test the functionality of the *test\_statistics* class.
  - (b) *test\_statistics* (`test_statistics.py`) class to perform statistical analysis on results of automated testing of a *Python* script.
19. `tutti_series.py`:
  - (a) A *Python* script to display series from B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> entries in a B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> database.
20. `utilities`:
  - (a) `file_io.py` is a *Python* script to perform input/output (I/O) operations on files, such as B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> databases/files and L<sup>A</sup>T<sub>E</sub>X documents.
  - (b) `queue_ip_arguments.py` is a *Python* script to process input arguments for a script to clean B<sub>I</sub>B<sub>T</sub>E<sub>X</sub> databases/files.
21. `validate_url.py`:

- (a) A *Python* script to check each BibTeX entry in a BibTeX database if it has the non-standard BIB<sub>T</sub>E<sub>X</sub> field(s) “Bdsk-Url-1” (and “Bdsk-Url-2”), and if the “Url” (and “Doi”) field(s) is(/are) missing; if these conditions are true, copy their values to the “Url” BibTeX field (and “Doi” field, if it is a DOI).

22. `z_booktitles.py`:

- (a) A *Python* script to display booktitles from all BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> database.

## Chapter 2

# Software Architecture of the BIB<sub>T</sub>E<sub>X</sub> Analytics Project

Software Architecture of the BIB<sub>T</sub>E<sub>X</sub> *Analytics* Project

# Chapter 3

## Future Work

Future work of the  $\text{BIB}\text{T}_{\text{E}}\text{X}$  *Analytics* project is described as follows:

1. Clustering of keywords/keyphrases:
  - (a) **Problem statements:**
    - i. For an author, find clusters of keyphrases, publishers, journal titles, conferences, ...
    - ii. For each keyphrase, determine the cluster of publishers, years, journal titles, conferences, ...
  - (b) Build dictionary of (*keyphrase*, *frequency*) two-tuples (or pairs).
  - (c) Sort the dictionary based on the frequency in these two-tuples.
  - (d) Alternate solution:
    - i. Build a set of (*keyphrase*, [*list of years*])
    - ii. [*list of years*] is a list of years of publications; or it is a set of years for publications that include the keyphrase *keyphrase*.
    - iii. Sort the set based on length of the list of years, [*list of years*].
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
8. Find emerging research trends to consider pivoting towards, or to get involved in side projects
  - (a) E.g., benchmark adiabatic quantum computers with topological computers and universal quantum computers [1].
