## **Abstract**

This documents how the repository of the BibTeX *Analytics* project is organized, and its software architecture. It also describes the future goals of the project for using a data analytics approach to recognize emerging trends in research, especially emerging research trends in electrical and computer engineering, computer science, and other fields, such as medicine, agriculture, and environmental science.

Insert abstract here.

More stuff to be included.

# Chapter 1

## Organization of the BIBTEX Analytics Repository

The main deliverables of the BIBTEX *Analytics* project are a *Python*-based software to perform reference management, and data analytics on BIBTEX entries to recognize emerging research trends.

The organization of the BIBTEX *Analytics* repository is described as follows:

1. `automated_regression_testing.py`:
  - (a) *Python* script to automate regression testing.
2. `big_input`:
  - (a) Data set for stress testing the software deliverable of the BIBTEX *Analytics* project.
3. `database`
  - (a) `bibtex_database` (`bibtex_database.py`) class represents (each instance of) a BIBTEX database of BIBTEX entries.
  - (b) `bibtex_database_test.py` is a *Python* script to test the functionality of the `bibtex_database` class.
  - (c) `entry` (`entry.py`) class represents each (instance of a) BIBTEX entry.
  - (d) `entry_test.py` is a *Python* script to test the functionality of the `entry` class.
  - (e) `key_check.py` is a *Python* script to check if each BIBTEX entry is valid.
  - (f) `key_check_test.py` is a *Python* script to test the functionality of the *Python* script `key_check.py`.
  - (g) `key_frequency_pairs.py` is a *Python* script to demonstrate how to sort a set of 2-tuples based on its first/former field and its second/last/latter field.
4. `duplicate_BibTeX_entries.py`:
  - (a) A *Python* script to determine if duplicate BIBTEX entries exist in a BIBTEX file/database. If such entries exist, warn the user that duplicate BIBTEX entries exist.
5. `editions.py`:
  - (a) A *Python* script to display a set of editions from all the BIBTEX entries in a BIBTEX file/-database.
6. `incremental_test.py`:
  - (a) A *Python* script to incrementally test features for performing reference management and data analytics operations with BIBTEX files/databases.
7. `input`:
  - (a) A set of BIBTEX files to test my *Python*-based BIBTEX *Analytics* software.

8. `institutions.py`:
  - (a) A *Python* script to display a set of institutions from BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> file/database.
9. `journal_titles.py`:
  - (a) A *Python* script to display a set of journal titles from BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> database.
10. `keywords_display.py`:
  - (a) A *Python* script to display a set of keywords from BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> database.
11. `makefile`:
  - (a) For build automation of *Python* scripts, not placed in subdirectories, in the repository.
12. `notes`:
  - (a) `gpl-license.text`, `LICENSE`, and `mit-license.text` are text files of the GNU General Public License (GNU GPL) (`gpl-license.text`) and The MIT License (`LICENSE` and `mit-license.text`)
  - (b) `guidelines`:
    - i. A document containing a set of guidelines on how to collaborate with me.
  - (c) `report`:
    - i. This document that describes the organization of the BIB<sub>T</sub>E<sub>X</sub> *Analytics* repository, the software architecture of the BIB<sub>T</sub>E<sub>X</sub> *Analytics* software, and future work of the BIB<sub>T</sub>E<sub>X</sub> *Analytics* project.
13. `organizations.py`:
  - (a) A *Python* script to display a set of organizations from BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> database.
14. `publishers.py`:
  - (a) A *Python* script to display a set of publishers from BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> database.
15. `readme.md`:
  - (a) A *Markdown*-based `readme` document briefly describing this project.
16. `rm_bibtex_metadata.py`:
  - (a) A *Python* script to delint/remove BIB<sub>T</sub>E<sub>X</sub> metadata from a BIB<sub>T</sub>E<sub>X</sub> database/file.
17. `sandbox`:
  - (a) A set of *Python* scripts to test different concepts in *Python*.
18. `statistics`:
  - (a) `test_statistics_tester.py` is a *Python* script to test the functionality of the `test_statistics` class.
  - (b) `test_statistics` (`test_statistics.py`) class to perform statistical analysis on results of automated testing of a *Python* script.
19. `tutti_series.py`:
  - (a) A *Python* script to display series from BIB<sub>T</sub>E<sub>X</sub> entries in a BIB<sub>T</sub>E<sub>X</sub> database.
20. `utilities`:
  - (a)
21. `validate_url.py`:
  - (a)
22. `z_booktitles.py`:
  - (a)
- 23.

## Chapter 2

# Software Architecture of the BIB<sub>T</sub>E<sub>X</sub> Analytics Project

Software Architecture of the BIB<sub>T</sub>E<sub>X</sub> *Analytics* Project

# Chapter 3

## Future Work

Future work of the  $\text{\LaTeX}$  *Analytics* project is described as follows:

- 1.
- 2.
- 3.
- 4.
- 5.
- 6.
- 7.
8. Find emerging research trends to consider pivoting towards, or to get involved in side projects
  - (a) E.g., benchmark adiabatic quantum computers with topological computers and universal quantum computers [\[1\]](#).
